PERSONAL SUMMARY

Business Analyst with experience combining operational expertise, data analytics, and stakeholder management to support data-driven decision-making and business improvement. Skilled in SQL, Tableau, Python (Pandas), Excel, relational database design, data modeling, and KPI development, with the ability to transform complex data into actionable insights. Experienced in process analysis, performance reporting, and cross-functional collaboration, bringing a strong understanding of business operations and the ability to translate business requirements into effective analytical solutions.

CORE COMPETENCIES

- Business Analysis
- Data Analysis & BI
- SQL & Data Modelling
- KPI & Performance Reporting
- Process Improvement
- Stakeholder Management

WORK EXPERIENCE

Betterworks CIC | London

Founder & Organisational Development Lead (Part-time Initiative) December 2025 - Present

- Developed strategic and operational frameworks for a social enterprise initiative focused on improving employment outcomes through structured work opportunities.
- Conducted stakeholder engagement, market research, and operational analysis to identify service opportunities and develop sustainable operating models.
- Designed reporting structures, performance measures, and KPI frameworks to monitor organisational objectives and support data-driven decision-making.
- Managed cross-functional planning across operations, partnerships, finance, and service development activities.
- Applied process improvement principles to evaluate workflows, identify operational requirements, and translate business objectives into practical solutions.

Caffe Nero | London

Assistant Store Manager (Trainee)

October 2022 - December 2025

- Analysed operational dashboards, sales trends, labour productivity, and wastage data to identify performance opportunities and support data-driven decisions.
- Reduced product wastage to 0.6% against a 1% company target through root-cause analysis of inventory discrepancies, identifying incorrect product entries and implementing process improvements sustained over two quarters.
- Evaluated hourly sales patterns and customer demand trends to optimise labour deployment and scheduling for teams of up to 14 colleagues, balancing productivity and service requirements.
- Monitored operational KPIs and produced performance reporting covering sales, stock control, cash management, and compliance to support management reviews and continuous improvement.

TejasAsia | New Delhi

Trustee - Operations, Compliance & Governance

December 2019 - January 2022

- Analysed operational dashboards, sales trends, labour productivity, and wastage data to identify performance opportunities and support data-driven decisions.
- Reduced product wastage to 0.6% against a 1% company target through root-cause analysis of inventory discrepancies, identifying incorrect product entries and implementing process improvements sustained over two quarters.
- Evaluated hourly sales patterns and customer demand trends to optimise labour deployment and scheduling for teams of up to 14 colleagues, balancing productivity and service requirements.
- Monitored operational KPIs and produced performance reporting covering sales, stock control, cash management, and compliance to support management reviews and continuous improvement.

EDUCATION

Master of Science (MSc) in Management

Middlesex University | London

October 2022 - November 2023

- Modules included Strategy, Leadership & Management, Management Decision Making, Management Analytics and Organisational Leadership.
- Applied analytical techniques developed through MSc modules in Management Analytics and Management Decision Making to interpret operational data, forecast demand and support commercial decision-making in a high-volume airport store.

TECHNICAL SKILLS

Analytics & BI:

- Tableau
- Excel Advanced
- Dashboard Development
- Data Visualisation
- KPI Reporting

Data & Programming:

- SQL
- Python (Pandas)
- Data Cleaning
- Data Validation

Database & Modelling:

- Relational Database Design
- Star Schema
- ETL Concepts

PROJECTS

Formula 1 Performance Analytics Project | SQL, MySQL, Data Modelling, Python, Git & GitHub

- Developed an end-to-end performance analytics solution analysing Formula 1 race, qualifying, pit stop, and lap timing data from the Jolpica REST API.
- Built Python-based ETL workflows to extract, transform, and load API data into a structured MySQL analytical database.
- Designed relational data models using primary and foreign keys to maintain data integrity across driver, constructor, race, and performance datasets.
- Created analytical datasets to evaluate qualifying performance, race outcomes, pit stop efficiency, and driver consistency using SQL analysis.
- Prepared structured datasets for business intelligence reporting and performance insights.

Swiftfulfil Operations Analytics Project | SQL, Python (Pandas), Tableau, Excel, Git & GitHub

- Developed an operations analytics solution to analyse customer, product, sales, and fulfilment performance using SQL, Python, and Tableau.
- Designed and structured relational datasets, applying data cleaning, validation, and quality checks to create reliable analysis-ready data.
- Developed Tableau dashboards and KPI reporting to provide visibility into revenue trends, customer behaviour, product performance, and operational metrics.
- Analysed business performance data to identify trends, operational gaps, and improvement opportunities, translating findings into actionable insights.
